100% Scalable Wireless, 100% Discount

Available for all Central Wireless Standard subscriptions

The global pandemic has forced organizations to rethink their approach to connectivity, access, and IT management. With more solutions moving to the cloud, and workforces becoming more distributed, the need for flexible, remote management and scalable connectivity has grown. To help you navigate the shift, Sophos is currently offering the enhanced feature set available in Sophos Central managed Wireless for free.

100% discount on all currently available subscription terms

Quote the following code when ordering to receive 100% discount on your Central Wireless Standard subscription

GLOBAL_CWIFI_FREE

Discount available for both new subscription purchases and renewals. Full terms and conditions on reverse

Scalability

Managing your Wi-Fi in the cloud gives you endless scalability – no hardware constraints or considerations – just grow as you need.

Expanding your deployment is as simple as adding another access point.

Additional remote locations need nothing more than internet access to set up connectivity.

Multi-site Management

Sophos Central is the ideal solution to manage your distributed organization remotely.

No matter where your users or APs are today, your Wi-Fi management is accessible from wherever you are.

Set up and monitor your sites, schedule firmware updates and make configuration changes – no other maintenance is required.

Sophos Central

Manage Sophos Wireless on its own, or alongside your Firewall, Endpoint, Mobile, Email, Encryption, and Server Protection.

Benefit from a broader feature set for RF management, guest Wi-Fi, and synchronized security.

As the ultimate management platform, Sophos Central offers full resiliency, even upon internet outages.

If you're currently managing your Wi-Fi on your firewall, there are even more benefits. Check the next page for further details.

SOPHOS

Migrating From Firewall-Managed Wi-Fi?

If you're currently managing your access points on your firewall, switching over to Sophos Central brings many additional security, management, and performance benefits.

Always-on Access

Firmware upgrades on your firewall can lead to network downtime, disrupting Wi-Fi connectivity.

With today's often restricted access to on-premises firewalls, switching to cloud-managed Wi-Fi provides secure, flexible, interruption-free access from any location. Simply extend your corporate-managed Wi-Fi to your remote sites (incl. home offices).

Sophos Central offers extensive troubleshooting and logging capabilities with audit logs, event logging and diagnostics.

Enhanced Wi-Fi Security

Multiple and separate SSIDs on Central Wireless map to discrete and separate zones on the firewall.

Provide the right level of access for employees and guests (inside and outside of the office) using social login.

Benefit from rogue AP detection to detect malicious Wi-Fi access points. And for synchronized security, the integration with Sophos Mobile provides network access control for managed devices.

Extended AP Series Support

The legacy AP Series access points are not supported on the latest XGS Series firewall appliances, but this shouldn't be a hindrance to your hardware refresh.

Sophos Central can help you bridge the budget gap and continue using your existing AP Series* until you're ready to refresh.

With bulk registration in Sophos Central and simple setup and configuration, making the switch is painless and now comes at no extra cost.

*AP 15, 55 and 100 models only.

The Wireless Licensing Guide under sophos.com/wireless includes a full feature comparison.

Terms and Conditions

- The discount code is valid from August 2021 until otherwise notified by Sophos.
- Sophos is providing this code to enable the distribution and sales channel to provide 100% discount on all currently available Central Wireless Standard subscriptions:
  - Central Wireless Standard (for APX)
  - Central Wireless Standard – Entry (term must not extend beyond March 31, 2023)
  - Central Wireless Standard – Performance (term must not extend beyond March 31, 2023)
- The discount is applicable to all available subscription terms and all volume bands and does not require the purchase of any other product.
- The discount is available for both new purchases and renewals and will be applied to the purchase cost of the subscriptions only.
- The discount code may be combined with any other Sophos promotional offers.
- Deal registration is not a requirement for this discount.
- Notwithstanding the foregoing, all parties understand that Sophos's distributors and resellers (together, "Partner") are independent third parties and free in their commercial decisions regarding pricing and discounts.
- The use of the discount code is subject to the terms and conditions/agreement governing the Partner's relationship with Sophos.
